

Pack-it With Packserv

April 2008 Newsletter

Welcome to the tenth issue of **Pack-it With Packserv**, Packserv's monthly newsletter offering useful solutions for your business

Spotlight on...

Labellers - what machine will do the best job for your product

Packserv is the only rental company of its kind to offer a comprehensive fleet of labelling machines that will fit almost any application and rental budget. Because we have the largest fleet of its kind our expertise is diverse. It is easy to assume that labelling containers is an uncomplicated process associated with packaging a product but this assumption couldn't be further from the truth as there are many factors affecting what appears to be a straightforward label application and we will run through these with you upon consultation. When we install a labelling machine we may bring several different types of machines to ensure you get the right labeller for your job, if you are some distance away then we offer a "**compatibility testing**" service **free of charge** to ensure you are provided with the best labelling machine for your application. This involves you sending a sample of labels and containers for our free trial & testing. If you are at the pre-packaging stage of printing your labels you are welcome to contact Packserv so that we can consult you in conjunction with your printer on your application before you decide on the final label attributes, this could save you thousands of dollars on your printing costs.

Label Dispenser by Compact

Ideal for bottle tops, surfaces where an applicator can't be used or tricky spots
Electric bench top
Label waste re-wind
Saves time when manual applying is used

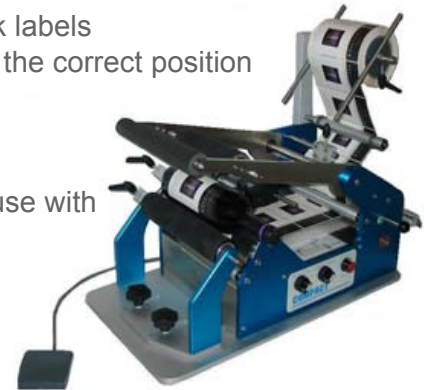

Compact-a-pad by Compact

Flat sided or square containers, jar tops, oval shaped bottles
Ideal for flat surfaces
Will do front/back application
Semi automatic bench top
Label waste re-wind
Can connect to the Datamax printer for use with our [print-apply](#) solution

Compact-a-wrap by Compact

Round bottle labelling
Applies single, wrap around or front/back labels
Automatically places the second label in the correct position
Semi automatic bench top
Can have orientation fitted for over-label
Label waste re-wind
Can connect to the Datamax printer for use with our [print-apply](#) solution

Carton Security Tamper-Tel Box Labeller by Compact

Cartons, boxes, or any surface with a corner
Semi automatic bench top
Label waste re-wind
Can connect to the Datamax printer for use with our [print-apply](#) solution
